

MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option:

 Which of the following methods do we use to find the best fit line for data in Linear Regres A) Least Square Error (T) B) Maximum Likelihood C) Logarithmic Loss D) Both A and B 	ssion?
 Which of the following statement is true about outliers in linear regression? A) Linear regression is sensitive to outliers(T) B) linear regression is not sensitive to outliers C) Can't say D) none of these 	s
3. A line falls from left to right if a slope is Negative?A) Positive B) Negative C) Zero D) Undefined	
4. Which of the following will have symmetric relation between dependent variable and indepA) RegressionB) Correlation C) Both of them(T)D) None of these	oendent variable?
5. Which of the following is the reason for over fitting condition?A) High bias and high varianceB) Low bias and low varianceC) Low bias and high variance (T)D) none of these	
 6. If output involves label then that model is called as: A) Descriptive model B) Predictive modal (T) C) Reinforcement learning D) All of the above 	
7. Lasso and Ridge regression techniques belong to? A) Cross validation B) Removing outliers C) SMOTE D) Regularization (T)	
8. To overcome with imbalance dataset which technique can be used?A) Cross validation B) RegularizationC) Kernel D) SMOTE (T)	
 9. The AUC Receiver Operator Characteristic (AUCROC) curve is an evaluation metric for biproblems. It uses TPR and FPR to make graph? A) TPR and FPR (T) B) Sensitivity and precision 	inary classification
C) Sensitivity and Specificity D) Recall and precision	
10. In AUC Receiver Operator Characteristic (AUCROC) curve for the better model area under less.A) True B) False (T)	r the curve should be
11. Pick the feature extraction from below: A) Construction bag of words from a emailB) Apply PCA to project high dimensional dataC) Removing stop wordsD) Forward selection (T)	
In Q12, more than one options are correct, choose all the correct options:	

12. Which of the following is true about Normal Equation used to compute the coefficient of the Linear Regression?

A) We don't have to choose the learning rate.

- B) It becomes slow when number of features is very large.
- C) We need to iterate. (T)
- D) It does not make use of dependent variable. (T)

MACHINE LEARNING

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

Regularization is a technique which makes slight modifications to the learning algorithm such that the model generalizes better. This improves the model's performance on the unseen data as well.

14. Which particular algorithms are used for regularization?

There are three main regularization techniques

- * Ridge Regression (L2 Norm)*Lasso (L1 Norm) *Dropout
- 15. Explain the term error present in linear regression equation?

It is often said that the error term in a regression equation represents the effect of the variables that were omitted from the equation.
